- Max Rackable Depth: 450mm
- Wall Mountable
- Locking Door with Large Viewing Window
- Fan Vents
- Large Cable Routing Holes

*The **SVRK Series Deep 600mm Server Rack** from **Lectronify** is a 12 RU wall mountable cabinet enclosure for 19" wide servers, networking devices, or telecom gear. This server rack is designed to accept the included front and back rack rails for large devices or units that require four-corner support, and it can be wall mounted (using included hardware) or function as a stand-alone unit.*

The Deep Server Rack includes a locking door with transparent window for securing your installed devices from tampering, and the rugged steel construction can reliably hold gear up to 132 lb in weight. Constructed with vents that accept optional rack fans for steady airflow, this server rack is engineered for maximum protection of your equipment and includes large holes on the back, top, and bottom for easy cable runs in any direction.

Wall Mountable

The wall-mounting option is perfect for installing your servers into tight spaces that are out of the way, like closets and over doorways, so you can preserve precious floor space and minimize clutter. The rack is made with integrated mounting key holes and includes a separate mounting bracket.

Locking Door

A locking door is included to restrict access to the rack. The door has a large window, so you don't have to open the door to monitor your server's status.

Rugged Steel Construction

This is not a casual rack for lightweight equipment. This server rack features heavy-duty steel construction and is made for demanding work environments.

Fan Vents

Airflow throughout the rack will keep your gear from overheating. The rack is designed with vents that accept two dedicated Lectronify RKFN-1 fans.

Cable Routing Panels

The biggest challenge of any rack is how to route all the cables. The Lectronify Server Rack has large back, top, and bottom holes that will accommodate multiple cables running in any direction. Panels are included to cover the unused holes and isolate your gear.
