

Kopul MuteMate-85L Latching Microphone Mute/Talk Button

Key Features

- Latching Mute or Activate Microphone
- Press to Mute and Press Again to Talk
- Big Gold Mute / Talk Button
- For Dynamic and Condenser Microphones
- 85 dB of Mic Attenuation
- 3-Pin XLR Input and Output
- For Use on a Desktop or as a Footswitch

- Rugged Metal Housing with Compact Design
- Non-Slip Tight-Grip Rubber Feet
- Mount Holes for Permanent Installation

*The **MuteMate-85L** from **Kopul** is a mute/talk button that's compatible with both condenser and dynamic microphones. Inserting the switch between your microphone and your computer or mixer allows you to activate or mute your microphone as desired. Once pressed, this latching switch keeps your mic muted until it's pressed again, unlike having to hold down a momentary mute button.*

The MuteMate-85L features 3-pin XLR connectors for mic input and signal output to a recorder, sound system, or audio workstation. The mute setting attenuates mic output by 85 dB, so under normal gain conditions, broadcast audiences, recording talent, and online conferences won't hear coughs or side conversations. Pressing the switch again activates the microphone for talkback in studio applications, meetings, presentations, and video chats. An indicator LED illuminates when phantom power is present.

Press to Talk / Press to Mute

The MuteMate-85L lets you switch your microphone on or off with one press of a button, unlike having to hold down a momentary mute button. Whether leading a Zoom meeting or addressing a conference, you may want to have a live microphone all the time. However, when you're recording talent or in a noisy environment while you're in an online conference, it's appropriate to mute your microphone until you have something to say.

Silent Switching

This switch assures you of silent muting and unmuting no matter what kind of mic you use. Listeners won't be interrupted with a pop when you change the mic's status.

Note: When changing from a condenser microphone to a dynamic microphone, push the switch on and off 10-15 times to dissipate any residual phantom power in order to prevent popping sounds.

On/Off Indicator Light

The LED indicator will light when phantom power is present. It's located right next to the button, so you can easily always see your mic's on/off status.

Dynamic and Condenser Microphones

This mute switch is compatible with both condenser and dynamic microphones, which makes it a great addition to your audio setup in a pro broadcast studio or for applications like home recording, podcasts, or interviews.

Compatible with Signal Boosters

The MuteMate-85L adds an on/off switch when you're using the most popular brands of low-gain dynamic and ribbon microphones. When you add an inline signal booster or an inline mic preamplifier, this switch is a great studio addition for recording and broadcast applications.

Signal Attenuation

The switch attenuates your microphone signal by 85 dB. When used in normal sensitivity and gain conditions between 30 and 60 dB, your microphone will be entirely muted when the MuteMate-85L is activated.

Rugged Metal Housing

The MuteMate-85L is made for repeated use and travel. The all-metal construction will stand up to bumps and dings, whether it's in a gear case or in your pocket. Its rugged chassis also supports being used as a foot switch.

Big Gold Button

Unlike the small talkback buttons on a console, the on/off switch is big and gold, so it's almost impossible to miss. For those times when you need to quickly swat at or stomp on the button, you'll be able to hit it, so you can quickly add or subtract what you're saying.

Mounting Options

Nonslip rubber feet will keep the switch from sliding, so it will stay put on a polished desk or floor. The housing also has mounting holes for more permanent installation on a podium, studio, or workstation.

Items Included

- Kopul MuteMate-85L Latching Microphone Mute/Talk Button
- Limited 1-Year Manufacturer Warranty
